CONTACT

Email: aryannsv@gmail.com
LinkedIn: aryan-maurya-vns
GitHub: aryanRN2
LeetCode: 200+ Problems Solved
Location: Varanasi, India

KEY SKILLS

- Agentic AI & Machine Learning
- Fullstack Java Development
- Python, JS, TypeScript, SQL
- Next.js, React, HTML/CSS
- GCP, Vercel, Kubernetes
- Database Mgt (PostgreSQL)
- Git/GitHub

CERTIFICATIONS

- Google Data Analytics
- Classical ML (IIT Guwahati)
- Cloud Computing (IIT Madras)
- Machine Learning Specialization (DeepLearning.AI)
- LangChain (DeepLearning.AI)
- SWE Intern (HackerRank)

EDUCATION

Banaras Hindu University (BHU)
BS in Mathematics
2023 - Present

IIT Madras (Online)
BS in Data Science
2023 - Present

ABOUT ME

Software Engineer and Data Scientist with expertise in full-stack web development and scalable machine learning infrastructure

Passionate about automating model training pipelines, streamlining feature stores, configuring Kubernetes clusters, and establishing end-to-end MLOps lifecycles. Experienced in designing AI-powered platforms, comprehensive digital libraries, and advanced data-driven web applications using modern technologies like Next.js, Python, PostgreSQL, and GCP.

PROJECTS

SciQB Platform 2026
sciqb.com | Node.js, JS, Tailwind CSS, Backblaze B2

- **Full-Stack Development:** Engineered a high-fidelity educational assessment platform serving thousands of university students with mock exams, official syllabi, and transcribed previous year question papers.
- **AI Integration:** Integrated Large Language Models (LLMs) via secure proxies (NVIDIA, HuggingFace) to act as an on-demand intelligent tutor, dynamically explaining complex questions and answers to students.
- **Backend Security & Architecture:** Built a custom Node.js server featuring a Backblaze B2 integration that generates signed URLs to protect private PDF assets from unauthorized direct downloads.
- **Data Encryption:** Developed an API endpoint with custom XOR encryption to securely deliver over 730+ LaTeX-based question papers (93,000+ lines of code) across 10 university departments to the client side.
- **Modern Frontend:** Designed a responsive, accessible user interface using Tailwind CSS and Vanilla JavaScript, implementing modern design principles like glassmorphism and micro-animations to enhance user engagement.
- **Rate Limiting & Optimization:** Implemented custom IP-based rate limiting on sensitive API endpoints to prevent abuse and ensure high availability of the assessment engine.

VRS Digital Library Portal 2026
Flask, PostgreSQL, JavaScript, Vercel

- Built a serverless seat allotment platform managing real-time reservations, financial audits, and user memberships.
- Designed an interactive seat matrix with automated shift-conflict resolution to guarantee data integrity and prevent double-bookings.
- Automated user communications by integrating the WhatsApp Cloud API for instant credential and receipt delivery.
- Implemented dynamic PDF receipt generation (ReportLab) and Excel financial data exports for administrative auditing.

Mini Projects 2025 - 2026
Python, LLMs, NLP, APIs

- **Handwritten to LaTeX:** Developed a machine learning vision pipeline that accurately interprets handwritten mathematical equations and automatically generates perfectly formatted LaTeX code.
- **Intelligent AI Chatbot:** Built a conversational AI agent capable of context-aware responses, reasoning, and answering user queries using advanced Natural Language Processing and LLM APIs.
